

TO WHOM IT MAY CONCERN

I am happy to write a recommendation for Muhammad Azam, who has worked with Omdena from July, 2023 to September, 2023.

While in Omdena, Muhammad Azam participated in the following Omdena Local Chapter Challenges:

- Detecting Fake News Using AI in Liberia
- Advancing Weather Prediction with Machine Learning and Python

In the above projects, Muhammad Azam was an active collaborator, and thanks to his experience in Machine Learning, he was able to contribute immensely to the projects. Muhammad Azam was also a reliable contributor who always submitted tasks on time and was a team player with good communication skills who collaborated with other Engineers from all around the world.

We had the pleasure of working with Muhammad Azam, and I am confident in recommending him for future endeavors that allow fulfilling his dreams. I am very sure Muhammad Azam will make a great impact and be a valuable asset wherever he works.

If you have any further questions about Muhammad Azam, feel free to reach Omdena Project Team at project@omdena.com.

Best regards,
